Profile

Computer Science undergraduate (CGPA 3.64/4.00) with hands-on full-stack development experience across the MERN stack, PHP, and PostgreSQL, and a strong foundation in data structures, algorithms, and relational database design. Built and shipped multiple end-to-end applications, including one integrating a REST-based AI assistant for real-time query handling. Seeking a software engineering role where I can apply full-stack and database engineering skills, with a growing focus on agentic AI systems.

Education

Gift University (Gujranwala Institute of Future Technology), Gujranwala, Pakistan

B.S. Computer Science — CGPA: 3.64 / 4.00

Nov 2024 – Present

Relevant Coursework: Data Structures & Algorithms, Advanced Database Management Systems, Automata Theory, Object-Oriented Programming, Software Engineering, Web Engineering

Projects

Enterprise-Style Warehouse Management System

PostgreSQL, PL/pgSQL, Node.js — Academic Project

- Designed a multi-tier PostgreSQL schema for multi-warehouse inventory and order tracking, normalized to 3NF with foreign key constraints to eliminate redundant data.
- Wrote server-side triggers and stored procedures to automatically update inventory levels and enforce data integrity on every transaction.
- Used PL/pgSQL cursors to process high-volume end-of-day audit logs without loading full result sets into memory.

AI-Integrated POS & Inventory Platform

Java, PHP, SQL, DSA — Group Project

- Built a full-stack Point of Sale system handling order processing, inventory updates, and receipt generation.
- Implemented a FIFO queue for order processing and a stack for rollback of failed transactions.
- Connected a REST-based AI assistant to answer customer queries and guide in-store navigation in real time.
- Indexed inventory lookups with HashMaps to speed up item search over standard linear lookups.

Relational Airline Management & Ticketing System

PHP, MySQL, JavaScript — University Project

- Designed the ER diagram and transactional schema for flights, routes, and passenger records, with cascading constraints to maintain referential integrity.
- Built an admin console for CRUD management of flights and passenger data.
- Indexed primary keys to keep query response times low as record volume grew.

Ride-Sharing & Flight Booking Portal

PHP, MySQL, Session Security — University Project

- Built a multi-service booking engine with authenticated sessions and route search/filtering.
- Stored geolocation datasets for fast route matching.
- Implemented connection pooling to keep sessions stable under concurrent load.

Skills

- Languages & Frameworks:** JavaScript, Java, PHP, SQL, PL/pgSQL, HTML5, CSS3, React.js, Node.js, Express.js, Tailwind CSS
- Databases & Tools:** PostgreSQL, MongoDB, MySQL, Git/GitHub, Vercel
- Core CS:** Data Structures & Algorithms (Stacks, Queues, Linked Lists, HashMaps, Trees), Relational Database Design
- Areas of Interest:** Agentic AI Systems, Workflow Automation, Voice AI Agents
- Languages Spoken:** English (Intermediate), Urdu (Native)

Activities & Leadership

Innovate X 2.0 Hackathon — Participant

Gujranwala, Pakistan | Aug 2025

- Competed in inter-university algorithmic challenges under timed constraints, collaborating with a team to design and implement clean solutions to complex logic problems.

Gift University Cricket Team — Team Captain

Gujranwala, Pakistan | Nov 2024 – Present

- Lead team strategy and match-day coordination, guiding the squad to 2nd place in inter-departmental competition.
